What factors influenced results

Toward the end of 2023, the municipal bond market rallied alongside declining U.S. Treasury yields. With investors in the market more willing to take on risk during the last year, lower quality bonds significantly outpaced their higher quality counterparts, despite the elevated rate volatility that was seen in 2024.

Within the fund, each sector contributed positively to overall returns. Holdings in health care, housing and corporate bonds were particularly additive during the period. Education and transportation debt also saw returns surpassing those of the overall portfolio. Idiosyncratic security selection was a factor in overall results, as bottom-up investment research provided opportunity for the fund to build a diversified portfolio of high-conviction ideas.

Holdings in non-general obligation* government issues, escrowed bonds† and general obligation municipals*, while still positive, were below the portfolio's overall return. Broadly speaking, those credits rated Baa/BBB or lower provided returns greater than those rated A or higher, where the majority of the portfolio's holdings reside.

* A general obligation bond is a municipal bond backed solely by the credit and taxing power of the issuing jurisdiction rather than the revenue from a given project.

† Escrowed to maturity municipal bonds are a form of pre-funded municipal bonds, which are backed by Treasury securities held in an escrow account.
