Management's discussion of fund performance

The fund's Class A shares gained 31.92% for the year ended October 31, 2024. That result compares with a 32.79% gain for the MSCI ACWI (All Country World Index). For information on returns for additional periods, including the fund lifetime, please refer to capitalgroup.com/mutual-fund-returns-A.

What factors influenced results

The U.S. economy continued to grow during the fund's fiscal year, and with inflation easing, the U.S. Federal Reserve began instituting interest rate cuts late in the period. Overseas, developed economies saw pockets of weakness. Domestic equities posted strong gains, while bond investors enjoyed higher yields for much of the period.

The fund's overall return was fueled by U.S.-based equities, which provided outsized returns for the period. Large-capitalization stocks tended to fare better than smaller company shares, while growth-oriented equities offered stronger returns than dividend payers.

In general, overseas equities offered positive returns for the portfolio, but lagged the returns of domestic equities and were lower than that of the portfolio's overall return.
