Management's discussion of fund performance

The fund's Class F-3 shares gained 29.46% for the year ended October 31, 2024. That result compares with a 38.02% gain for the S&P 500 Index. For information on returns for additional periods, including the fund lifetime, please refer to capitalgroup.com/mutual-fund-returns-F3.

What factors influenced results

During the fund's fiscal year, the U.S. market showed resilience, with positive economic data providing a counterweight to political uncertainties leading into the U.S. presidential election. Domestic equity markets achieved notable gains during the period. Consumer spending and labor market data did not disappoint as much as some feared it would, while easing inflation supported the U.S. Federal Reserve's first rate cut since 2020.

All sectors created positive results for the fund, led by financials, industrials and utilities. Top individual contributors included holdings from a broad range of sectors, such as industrials, technology, health care and financials. Most holdings are based in the U.S., which contributed positively to results in the fiscal year.

Conversely, while consumer staples, energy and communication services sectors posted positive returns, those sectors did not advance as much as others in the fund, and thus detracted from results. The fund's exposure to cash also detracted from results given the strong returns of the market, despite elevated interest rates producing some income for the fund.
