

### Quarter highlights

- Within equities, funds with a growth-and-income and equity-income focus outpaced those with a focus on growth.
- A sharp rally in Chinese shares meant funds with higher concentrations in emerging market stocks fared better than those with larger exposure to developed market stocks.
- Within fixed income, funds with more significant investments in longer dated bonds fared better than those with more significant investments at the short end of the curve.

### Market review

Global equities moved higher as central banks around the world slashed interest rates. Market returns broadened out to include value-oriented stocks and previously lagging sectors. Information technology stocks came under pressure as investors started to question high levels of spending on artificial intelligence applications.

Utilities and real estate stocks rallied as the U.S. Federal Reserve (Fed) and other central banks cut rates during the quarter and signaled further monetary easing in the months ahead. After posting strong returns in the first half of the year, tech stocks lagged the overall market. Elsewhere, Chinese stocks soared amid new government stimulus measures.

Bonds rose across the board (Bloomberg Global Aggregate Index) as many central banks ushered in a new era of loose monetary policy. The Fed, the European Central Bank and the Bank of England, among others, lowered rates amid signs of cooling inflation. The Bank of Japan was an outlier, raising rates and sparking a rally in the yen.

In foreign exchange markets, U.S. dollar weakness accelerated for much of the quarter. The dollar declined against the euro, the yen and most other currencies. The U.S. Dollar Index fell 4.8% for the quarter and 0.5% on a year-to-date basis.

### Portfolio review

Within equities, funds with a growth-and-income and equity-income focus outpaced those with a focus on growth. Higher yielding sectors, which are held in larger concentrations in funds with an income focus, outpaced the broader markets (70%/30% MSCI All Country World Index/Bloomberg U.S. Aggregate Index and the 65%/35% S&P 500 Index/Bloomberg U.S. Aggregate Index) as investors reassessed the pace at which rates may be cut. Meanwhile, tech stocks trailed the market, which weighed on growth-focused sectors.

Additionally, a sharp rally in Chinese shares meant funds with higher concentrations in emerging market stocks fared better than those with larger exposure to developed market stocks.

Within fixed income, funds with more significant investments in longer dated bonds fared better than those with more significant investments at the short end of the curve.

Portfolios are managed, so holdings will change. Visit [capitalgroup.com](http://capitalgroup.com) for current allocations.

Allocations may not achieve investment objectives. The portfolios' risks are related to the risks of the underlying funds as described herein, in proportion to their allocations.

Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Smaller company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. The return of principal for bond portfolios and for portfolios with significant underlying bond holdings is not guaranteed. Investments are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds.

Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. Income from municipal bonds may be subject to state or local income taxes and/or the federal alternative minimum tax. Certain other income, as well as capital gain distributions, may be taxable.

**Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the fund prospectuses and summary prospectuses, which can be obtained from a financial professional and should be read carefully before investing.**

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. When applicable, results reflect fee waivers and/or expense reimbursements, without which they would have been lower. Refer to [capitalgroup.com](http://capitalgroup.com) for more information. Expense ratios are as of each fund's prospectus available at the time of publication and include the weighted average expenses of the underlying funds.

The market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index. There have been periods when the funds have lagged the indexes.
