16 Short-term

18 Other fixed income offerings

Figures shown are past results and are not predictive of results in future periods. Returns for mutual funds are based on Class F-2 shares. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Market price returns for the ETFs are determined using the official closing price of the fund's shares and do not represent the returns you would receive if you traded shares at other times. For current information and month-end results, refer to capitalgroup.com.

Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value.

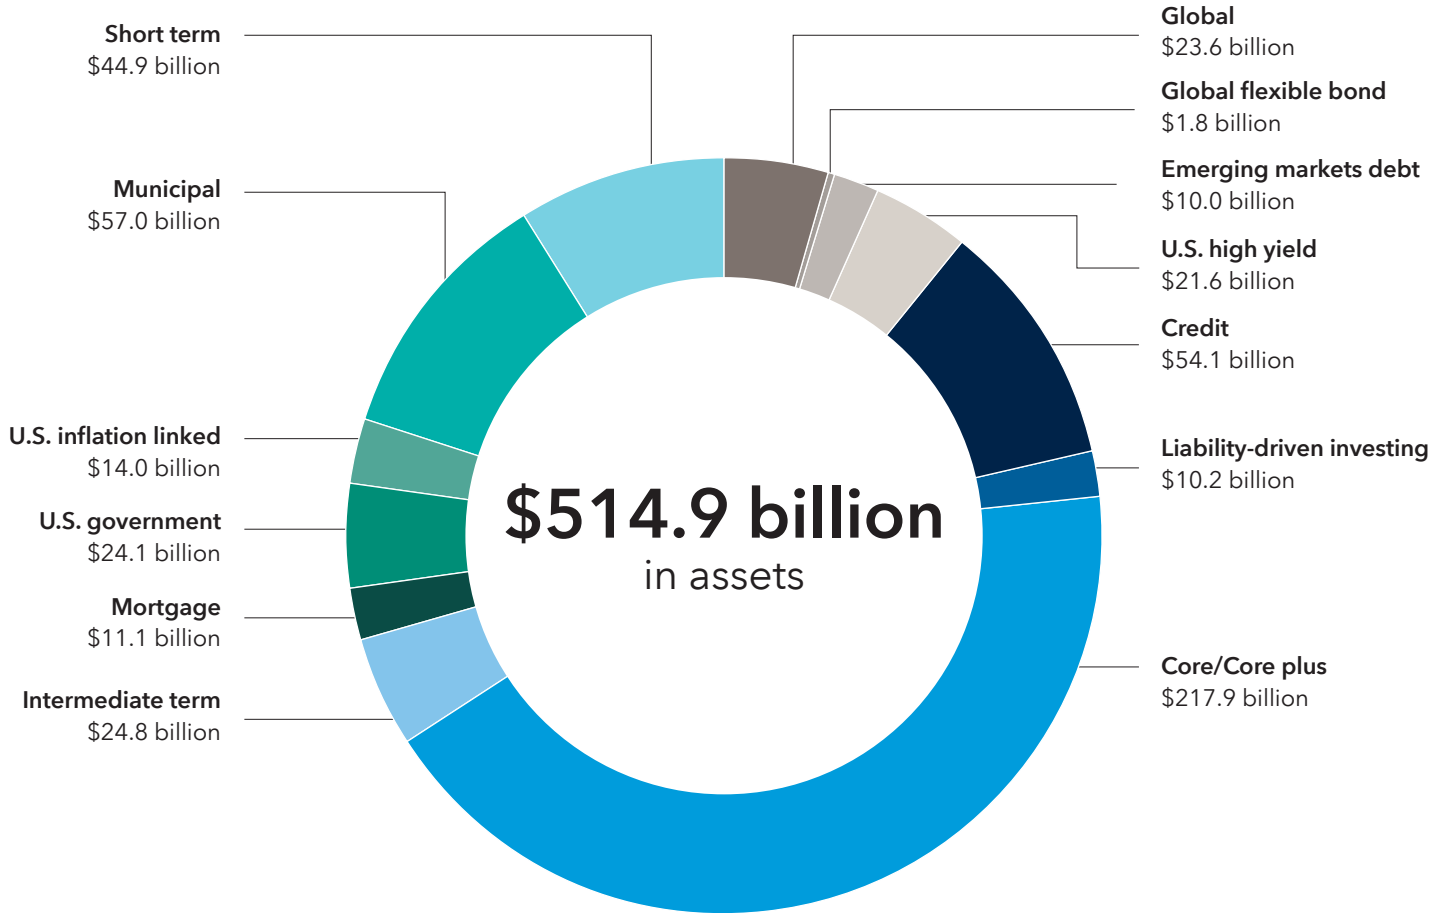

Our broad experience can help investors go farther

Extensive fixed income capabilities*

For 50 years, helping fixed income investors navigate market challenges remains one of our top priorities. Our team performs rigorous analyses to identify a variety of opportunities and trends. We address broad investment goals by investing in an expansive set of fixed income sectors.

Assets by strategy

We're committed to helping investors ...

Integrated research

Research is the backbone of our business and is essential to delivering superior results for our investors over the long term.

Portfolio construction

By combining our top-down global outlook with extensive bottom-up security analysis and risk management, the **Portfolio Strategy Group** provides valuable insights into economic and market developments that help our portfolio managers anticipate major inflection points.

Collaboration and communication

Our global team of **244** fixed income investment professionals includes **37** portfolio managers who average **25** years of investment industry experience.

Review and risk monitoring

Risk management is integrated into every step of our investment process. Our dedicated **Risk and Quantitative Solutions Group** provides analytics and understanding of positioning and risks in a portfolio while the **Principal Investment Officer** monitors total risk factors.

... stay on course

Strategic advantages

Low cost

All of our fixed income mutual funds offer lower-than-average expense ratios versus their industry peers.*

Commitment

One hundred percent of portfolio managers invest more than \$100,000 in the fixed income retail mutual fund they oversee, with more than half of those funds having at least one manager investing more than \$1,000,000 in their fund.†

Stewardship

We received a “High Parent” rating by Morningstar, reflecting an investment culture marked by lengthy tenures and strong manager fund ownership that we believe promotes superior long-term results.‡

*Source: Morningstar. Morningstar examined companies' cultures and ethical track records, along with the factors considered in its Morningstar Analyst Rating™ to determine rating for a fund company in one of five buckets: Low, Below Average, Average, Above Average and High, with High being the best. Capital Group received a Parent rating of High as of December 2023. Six-and-a-half percent of 169 firms analyzed also received the same rating as of that date. The parent pillar rating is a current view and is reflective of a firm's history, both recent and long term. Capital Group did not compensate Morningstar for the ratings and comments contained in this material. However, the firm has paid Morningstar a licensing fee to access and publish its ratings data. The payment of this subscription fee does not give rise to a material conflict with Morningstar.

Sources: Capital Group, Lipper, Morningstar.

*Based on the F-2 share class data as of 12/31/23. Eighteen out of 18 American Funds fixed income funds had expense ratios below the average for their respective Lipper categories, based on institutional load funds, excluding funds of funds.

†As of 12/31/23. Manager ownership excludes state-specific municipal funds.

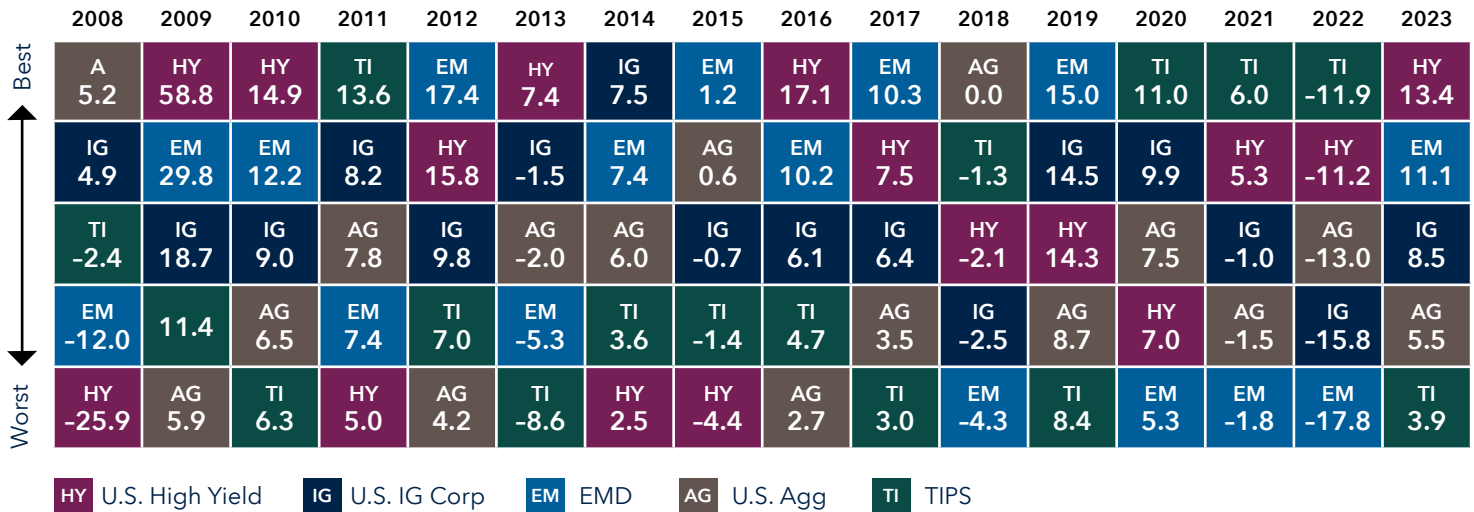

Turning short-term headwinds ...

Fixed income volatility is often driven by seismic shifts in macroeconomics and other markets

In a world of ever-present risks and unpredictable markets, relying on a static basket of unmanaged bonds may not result in the best possible outcomes. But as markets shift, research can unearth opportunities.

Annual bond sector returns have varied dramatically since the Global Financial Crisis*

Cumulative annual returns

Volatility has been persistent for stocks and bonds since 2020†

Sources: Capital Group, FactSet, RIMES.
As of 12/31/23.

*Returns shown are cumulative 1-year returns. U.S. HY represents Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index; U.S. IG Corp represents Bloomberg U.S. Corporate Investment Grade Index; EMD represents J.P. Morgan EMBI Global Diversified Index; U.S. Agg represents Bloomberg U.S. Aggregate Index, TIPS represents Bloomberg U.S. Treasury Inflation-Protected Securities (TIPS) Index.

†Interest rate volatility index represents the ICE BofAML U.S. Bond Market Option Volatility Estimate (MOVE) Index, and equity volatility index represents Chicago Board Options Exchange's Volatility (VIX) Index.

‡The implied volatility value is the likely range of movement in a security's price suggested by the market.

The market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

... into long-term fixed income opportunities

We aim to take advantage of flexibility and eliminate risk by seeking multiple sources of alpha

While volatility is a source of risk, it can also be a source of opportunity. Our fixed income solutions seek to address volatility head-on by adjusting investment portfolios when needed.

The four key roles in pursuit of ...

Navigate the complexities of the vast global fixed income universe

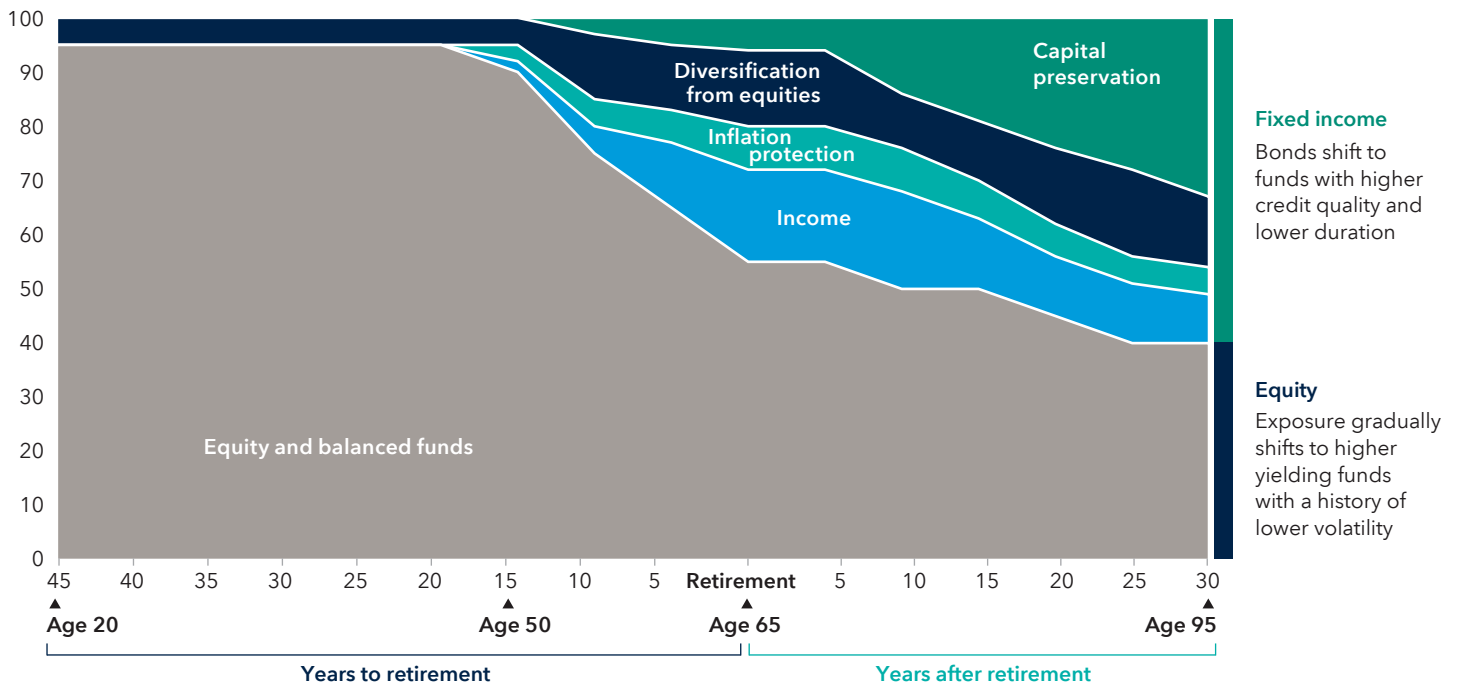

Depending on an investor's needs and risk appetite, fixed income can pursue a variety of outcomes. In moments of uncertainty, it is important to stop and reflect on the basic role of fixed income in a portfolio.

Focus on the fundamental benefits of fixed income

Fixed income in a target date glide path: an example of evolving needs of the four roles

Percentage of fund allocation

Sources: Capital Group, FactSet.

Target allocations as of December 31, 2023, and are subject to the oversight committee's discretion. Over the course of the year the Series will be implementing changes such as increasing exposure to New World Fund, decreasing American Funds Global Balanced Fund and adding an allocation to American Funds Emerging Markets Bond Fund. For current allocations to the underlying funds, visit capitalgroup.com. New target allocations will be reached by December 31, 2024. The investment adviser anticipates assets will be invested within a range that deviates no more than 10% above or below the allocations shown in the prospectus. Underlying funds may be added or removed during the year.

*Macro risks refer to events that can occur within a country that impact the financial markets, such as political events or changes.

... successful outcomes through all markets

Now may be the time to assess your fixed income position

Finding opportunities to enhance yield while managing the growing credit risk is critical for investors.

Examples of how our fixed income funds can serve clients' needs (For a 40% fixed income allocation)

Diversification from equities	Income	Capital preservation	Inflation protection
-------------------------------	--------	----------------------	----------------------

Clients need: A strong core bond allocation

			Portfolio statistics	U.S. agg*
CORE ■ ■ ■ ■ ■	The Bond Fund of America ABNFX (F-2), ABNDX (A)	20%	5.6% Yield to worst	5.0%
CORE-PLUS ■ ■ ■ ■ ■	American Funds Strategic Bond Fund ANBFX (F-2), ANBAX (A)	10%	6.0 yrs Duration	6.1 yrs
MULTI-SECTOR □ ■ □ □ □	American Funds Multi-Sector Income Fund† MIAZX (F-2), MIAQX (A)	10%	0.59 5-year correlation to equities, F-2	0.53

Clients need: A flexible solution

1. Diversification from equities – Consider removing multi-sector and adding government bonds

			Portfolio statistics
■ ■ ■ ■ ■	The Bond Fund of America	15%	5.0% Yield to worst
■ ■ ■ ■ ■	American Funds Strategic Bond Fund	15%	6.4 yrs Duration
■ ■ ■ ■ ■	U.S. Government Securities Fund GVTFX (F-2), AMUSX (A)	10%	0.45 5-year correlation to equities, F-2

2. Income – Consider reducing core, removing core-plus, increasing multi-sector and adding high-yield bonds

			Portfolio statistics
■ ■ ■ ■ ■	The Bond Fund of America	10%	6.8% Yield to worst
□ ■ □ □ □	American Funds Multi-Sector Income Fund	15%	4.4 yrs Duration
□ ■ □ □ □	American High-Income Trust AHIFX (F-2), AHITX (A)	15%	0.75 5-year correlation to equities, F-2

3. Capital preservation – Consider removing core-plus and multi-sector, and adding high-quality short-term bonds

			Portfolio statistics
■ ■ ■ ■ ■	The Bond Fund of America	15%	5.2% Yield to worst

*U.S. Agg represents Bloomberg U.S. Aggregate Index.

† If American Funds Multi-Sector Income Fund is not yet available on your platform, an equal combination of American High-Income Trust, American Funds Emerging Markets Bond Fund and American Funds Corporate Bond Fund can be substituted.

The portfolio statistics are a weighted average of the funds in the asset allocation approach and are as of 6/30/24. U.S. equity index proxy used is the S&P 500 Index. The asset allocation approach is hypothetical and for illustrative purposes only. We have identified which funds contribute to a particular role of fixed income based on the fund's investment strategies. The extent to which a fund contributes to a specified role depends on the portfolio's composition at any point in time.

Allocations, holdings, yields and other data shown do not reflect an actual portfolio. Financial professionals should tailor client recommendations to their individual circumstances.

Fund shares of U.S. Government Securities Fund are not guaranteed by the U.S. government.

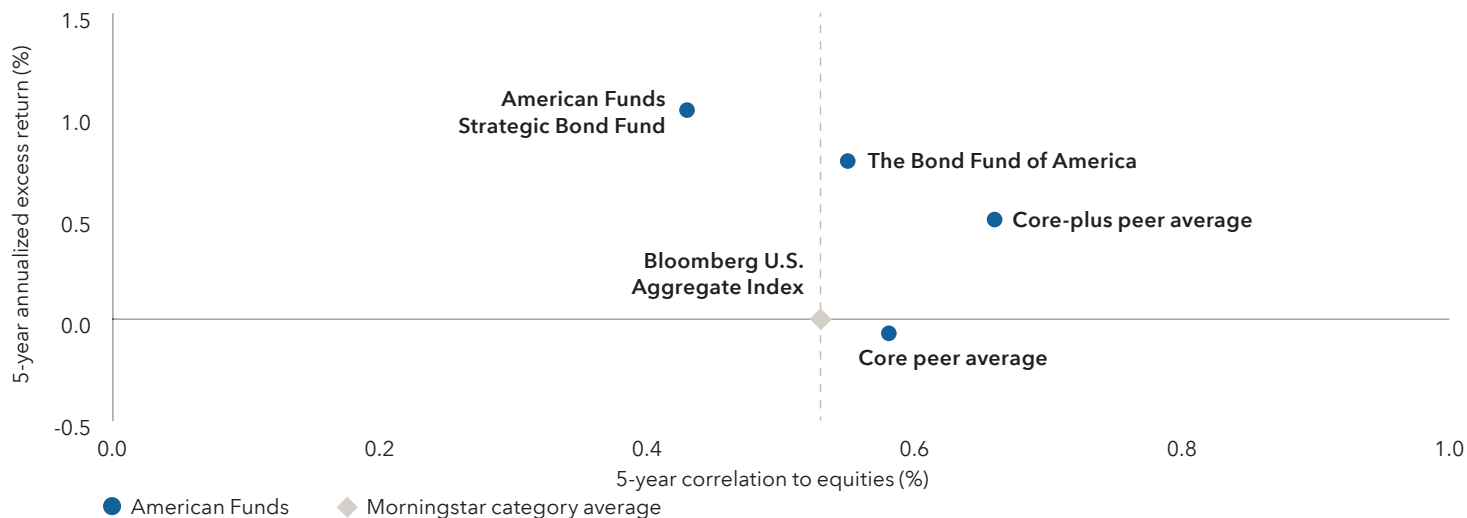

Refer to the glossary on page 18 for more information.

Aim to anchor portfolios with ...

Bond Funds That Behave Like Bond Funds®

Regardless of whether equity markets are volatile, interest rates are rising or credit spreads are widening, what investors expect from bond funds remains the same: alpha, income and stability. A true core bond fund should seek to provide elements of all four roles of fixed income, maintain a quality-oriented portfolio and deliver consistent excess returns versus its benchmark.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. Class F-2 shares were first offered on August 1, 2008. Class F-2 share results prior to the date of first sale are hypothetical based on the results of the original share class of the fund without a sales charge, adjusted for typical estimated expenses. Results for certain funds with an inception date after August 1, 2008, also include hypothetical returns because those funds' Class F-2 shares sold after the funds' date of first offering. Please refer to capitalgroup.com for more information on specific expense adjustments and the actual dates of first sale.

Returns for periods less than 1 year are cumulative.

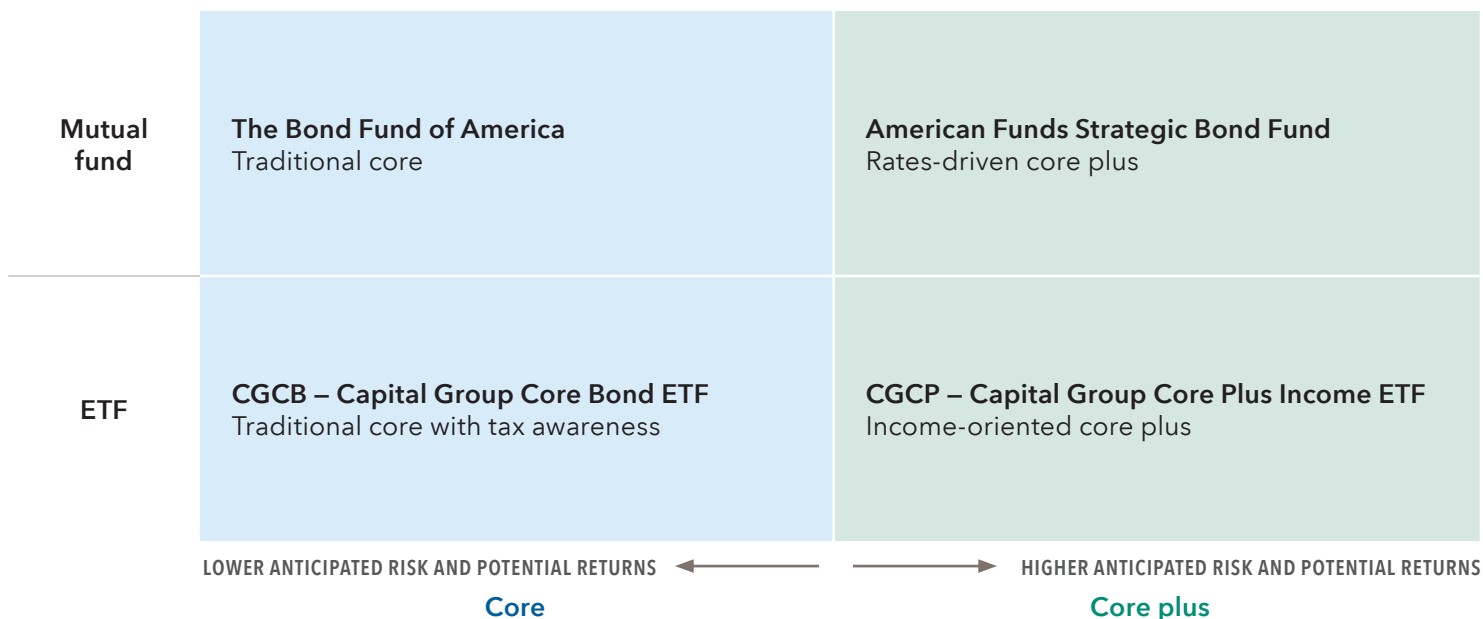

ETF market price returns since inception are calculated using NAV for the period until market price became available (generally a few days after inception).

Past results are not predictive of results in future periods.

[†] Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness (below investment grade is BB/Ba and below). If agency ratings differ, a security will be considered to have received the highest of those ratings, consistent with applicable investment policies. For American High-Income Municipal Bond Fund, such securities are placed in the lowest category, consistent with applicable investment policies. For American High-Income Trust, consistent with applicable investment policies, a security will be considered to have received the middle rating. If only two agencies rate a security, the lower rating is used. If only one rates a security, that single rating is used. Securities in the Unrated category have not been rated by a rating agency; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with applicable investment policies.

[‡] Total number of periods is as follows: MIAYX (28); AHIFX (401); EBNFX (63); BFCGX (103); BFWFX (407).

The expense ratios are as of each fund's prospectus available at the time of publication.

Put your money to work and ...

Consider an alternative to cash-like investments

Volatility brought on by rising interest rates, inflation concerns and geopolitical risks should serve as a reminder of the importance of balancing goals of reaching for higher returns while managing risk. A short-duration approach to fixed income investing may help alleviate rising interest rate concerns.

American funds short-term bond funds have offered relatively attractive yield potential

*The ticker symbol represents each fund as follows: IBAFX, Intermediate Bond Fund of America; SBFFX, Short-Term Bond Fund of America.

[†] Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness (investment grade is BBB/Baa and above). If agency ratings differ, a security will be considered to have received the highest of those ratings, consistent with applicable investment policies. Securities in the Unrated category have not been rated by a rating agency; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with applicable investment policies.

[‡] Total number of periods is as follows: IBAFX (401); SBFFX (177).

The expense ratios are as of each fund's prospectus available at the time of publication.

Fixed income glossary

Risk and other key statistics

Correlation

A statistical measure of how a security and an index move in relation to each other. A correlation ranges from -1 to 1. A positive correlation close to 1 implies that as one moved, either up or down, the other moved in "lockstep," in the same direction. A negative correlation close to -1 indicates the two have moved in the opposite direction.

Credit risk

The probability of a borrower defaulting on debt obligations.

Distribution rate (yield)

The distribution rate for all funds except money market funds is based on dividends paid over the last 12 months divided by either the maximum offering price or net asset value price plus any capital gains paid in the last 12 months.

Effective duration

A duration calculation for bonds that takes into account that expected cash flows will fluctuate as interest rates change.

Net high yield

Reflects impact of credit default swap protection, used to hedge systematic market risk and focus exposure on the idiosyncratic risk of high-conviction credits.

SEC yield

Reflects the rate at which the fund is earning income on its current portfolio of securities, while the distribution rate reflects the fund's past dividends paid to shareholders. Accordingly, the fund's SEC yield and distribution rate may differ.

Sharpe ratio

Uses standard deviation and return in excess of the risk-free rate to determine reward per unit of risk. The higher the number, the better the portfolio's historical risk-adjusted performance.

Yield to worst

The lowest yield that can be realized by either calling or putting on one of the available call/put dates, or holding a bond to maturity.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the fund prospectuses and summary prospectuses, which can be obtained from a financial professional and should be read carefully before investing.

This brochure must be preceded or accompanied by a prospectus or summary prospectus for the funds being offered.

If used after September 30, 2024, this material must be accompanied by the most recent applicable quarterly statistical updates for the products shown.

Capital Group exchange-traded funds (ETFs) are actively managed and do not seek to replicate a specific index. ETF shares are bought and sold through an exchange at the then current market price, not net asset value (NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV when traded on an exchange. Brokerage commissions will reduce returns. There can be no guarantee that an active market for ETFs will develop or be maintained, or that the ETF's listing will continue or remain unchanged.

Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries (also applies to CGCP, CGMS, CGCB, CGSD and CGUI). The return of principal for bond portfolios and for portfolios with significant underlying bond holdings is not guaranteed.

Investments are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings (also applies to CGCP, CGMS, CGSM, CGCB, CGMU, CGSD and CGUI).

Investments in mortgage-related securities involve additional risks, such as prepayment risk (also applies to CGCP, CGSD and CGMS). There are ongoing fees and expenses associated with owning bond fund shares, which is in contrast to owning individual bonds. Income may be subject to state or local income taxes and/or the federal alternative minimum tax. Certain other income, as well as capital gain distributions, may be taxable. State tax-exempt bond funds are more susceptible to factors adversely affecting issuers of its state's tax-exempt securities than a more widely diversified municipal bond fund. Income from municipal bonds may be subject to state or local income taxes (also applies to CGMU and CGSM). Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds (also applies to CGCP, CGMS, CGSM and CGMU). Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. If agency ratings differ, the security will be considered to have received the highest of those ratings, consistent with the fund's investment policies. (For American High-Income Municipal Bond Fund and American High-Income Trust, such securities are placed in the lowest category.) Securities in the Unrated category have not been rated by a rating agency; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with fund investment policies. The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds (also applies to CGCP, CGMS, CGCB, CGSD and CGUI). While not directly correlated to changes in interest rates, the values of inflation linked bonds generally fluctuate in response to changes in real interest rates and may experience greater losses than other debt securities with similar durations.

As nondiversified funds, Capital Group ETFs and American Funds Emerging Markets Bond Fund have the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund invested in a larger number of issuers. See the applicable prospectus for details.

For American Funds Strategic Bond Fund, frequent and active trading of portfolio securities may occur, which may involve correspondingly greater transaction costs, adversely affecting the results.

Interests in Capital Group's U.S. Government Securities portfolios are not guaranteed by the U.S. government.

A portion of Capital World Bond Fund's, American Funds Emerging Markets Bond Fund's and American Funds Strategic Bond Fund's distribution may be classified as a return of capital. Please see each fund's Annual Reports for details.

The market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index. There have been periods when the fund has lagged the index. Annualized 30-day yield is calculated in accordance with the SEC formula.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.

Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index covers the universe of fixed-rate, non-investment-grade debt. The index limits the maximum exposure of any one issuer to 2%.

Bloomberg U.S. Corporate Investment Grade Index represents the universe of investment grade, publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements.

Bloomberg U.S. Treasury Inflation-Protected Securities (TIPS) Index consists of investment-grade, fixed-rate, publicly placed, dollar-denominated and non-convertible inflation-protected securities issued by the U.S. Treasury that have at least one year remaining to maturity, and have at least \$250 million par amount outstanding.

The J.P. Morgan Emerging Market Bond Index (EMBI) Global Diversified Index is a uniquely weighted emerging market debt benchmark that tracks total returns for U.S. dollar-denominated bonds issued by emerging market sovereign and quasi-sovereign entities.

The MOVE Index measures the implied yield volatility of a basket of one-month over-the-counter options on 2-year, 5-year, 10-year and 30-year Treasuries.

The VIX Index is a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index (SPXSM) call and put options.

S&P 500 Index is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks.

Helping fixed income investors chart their own course

Our focus on long-term client outcomes and downside protection has led to strong relative results

A disciplined process guided by conviction

- Empowering research analysts to manage money enhances accountability and helps identify better opportunities
- A team approach results in high-conviction ideas gaining prominence in our portfolios
- 244 fixed income professionals collaborate regularly with their equity colleagues, leveraging our size and scale¹

Commitment to investor success

- Portfolio managers invest in their own funds – 100% manager ownership in each fixed income fund (excluding state-specific municipal funds)
- Manager compensation places an emphasis on long-term results, not assets under management²
- We offer mutual funds with low expense ratios³

Superior outcomes

- Delivered strong returns and risk-adjusted returns vs. peers⁴
- Help investors achieve diversification through attention to the correlation between bonds and equities relative to peers⁵
- Manage core bond mutual funds that have shown relative resilience in periods of equity market volatility⁶

¹ As of 6/30/24. Capital Group manages equity assets through three investment groups. These groups make investment and proxy voting decisions independently. Fixed income investment professionals provide fixed income research and investment management across the Capital organization; however, for securities with equity characteristics, they act solely on behalf of one of the three equity investment groups.

² Compensation paid to our investment professionals is heavily influenced by investment results over one-, three-, five- and eight-year periods. Increasing weight is placed on each successive measurement period to encourage a long-term investment approach.

³ Source: Lipper. Based on the F-2 share class data as of 12/31/23. Eighteen out of 18 American Funds fixed income funds had expense ratios below the average for their respective Lipper categories, based on institutional load funds, excluding funds of funds.

⁴ Data as of 12/31/23. Based on five- and 10-year total returns and Morningstar risk-adjusted returns of Class F-2 shares for taxable and tax-exempt bond funds. Peer group is defined as the Morningstar category for each fund. The majority of the funds outpaced their peer group medians.

⁵ Based on Class F-2 share results as of 12/31/23. Thirteen of the 18 fixed income American Funds that have been in existence for the three-year period showed a three-year correlation lower than their respective Morningstar peer group averages. S&P 500 Index was used as an equity market proxy. Correlation based on monthly total returns.

⁶ Data from Morningstar. Periods of equity volatility were defined as the most recent market corrections between April 2010 and December 2023, when price declines of 10% or more (without dividends reinvested) occurred in the unmanaged S&P 500 with 75% recovery. The Bond Fund of America, Intermediate Bond Fund of America, Short-Term Bond Fund of America and American Funds Strategic Bond Fund outpaced the S&P 500 during these periods of volatility. The returns of the funds and index are based on total returns for F-2 share class. There have been periods when the funds lagged the index, such as in rising markets.
