

## Historical fund allocations for model portfolios

Making portfolios personal

## Model portfolios allocation changes

The initial allocation and subsequent reallocation of underlying funds within these portfolios are a result of deep, fundamental research and the best thinking of Capital Group's investment professionals, specifically the Portfolio Solutions Committee and Capital Solutions Group. The first column for each model represents the model's target allocation at inception, while the last represents the model's current target allocation as of the date listed.

# Allocation changes for Capital Group Active-Passive Models

The initial allocation and subsequent reallocation of underlying funds within these portfolios are a result of deep, fundamental research and the best thinking of Capital Group's investment professionals, specifically the Portfolio Solutions Committee and Capital Solutions Group. The first column for each model represents the model's target allocation at inception, while the last represents the model's current target allocation as of the date listed. Models with only a single column have not yet experienced a change in allocation.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Portfolios are managed, so holdings will change. Visit [capitalgroup.com](https://capitalgroup.com) for current allocations.

Model portfolios are subject to the risks associated with the underlying funds in the model portfolio. Investors should carefully consider investment objectives, risks, fees and expenses of the funds in the model portfolio, which are contained in the fund prospectuses. Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Small-company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. A nondiversified fund has the ability to invest a larger percentage of assets in securities of individual issuers than a diversified fund. As a result, a single issuer could adversely affect a non-diversified fund's results more than if the fund invested a smaller percentage of assets in securities of that issuer. See the applicable prospectus for details.

All Capital Group trademarks mentioned are owned by The Capital Group Companies, Inc., an affiliated company or fund. All other company and product names mentioned are the property of their respective companies.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.

**Capital Group exchange-traded funds (ETFs) are actively managed and do not seek to replicate a specific index. ETF Shares are bought and sold through an exchange at the then current market price, not net asset value (NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV when traded on an exchange. Brokerage commissions will reduce returns. There can be no guarantee that an active market for ETFs will develop or be maintained, or that the ETF's listing will continue or remain unchanged.**

As nondiversified funds, Capital Group ETFs have the ability to invest a larger percentage of assets in securities of individual issuers than a diversified fund. As a result, a single issuer could adversely affect a fund's results more than if the fund invested a smaller percentage of assets in securities of that issuer. See the applicable prospectus for details.
